## TECHNICAL PROFICIENCY

**Languages:** Java ,Sql, JavaScript.  
**Web Technologies:** HTML5, CSS, Frontend Development

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Web Application Clones</b>   <i>HTML, CSS, Frontend Development</i>                                                                                                                                                                                                                                                                                                                                                                                                              | Aug 2025 – Sep 2025 |
| <ul style="list-style-type: none"><li>– <b>Instagram Homepage Clone:</b> Built a responsive Instagram UI clone with sidebar navigation, stories section, feed layout, and suggestions panel using Flexbox and media queries with a dark-mode design.</li><li>– <b>YouTube Homepage Clone:</b> Developed a responsive YouTube UI clone featuring a navigation bar, sidebar, and video grid layout. Used Flexbox-based structuring and integrated icons using Font Awesome.</li></ul> |                     |
| <b>To-Do List Application</b>   <i>HTML, CSS, JavaScript, Local Storage</i>                                                                                                                                                                                                                                                                                                                                                                                                         | Jun 2026            |
| <ul style="list-style-type: none"><li>– Developed a responsive task management application with task creation, inline editing, deletion, and completion tracking.</li><li>– Implemented Local Storage to persist user data and utilized dynamic DOM manipulation for real-time task updates.</li></ul>                                                                                                                                                                              |                     |
| <b>Currency Converter</b>   <i>HTML, CSS, JavaScript, FETCH API</i>                                                                                                                                                                                                                                                                                                                                                                                                                 | Jun 2026            |
| <ul style="list-style-type: none"><li>– Built a responsive currency converter that retrieves real-time exchange rates using a REST API.</li><li>– Implemented asynchronous API requests using Fetch API and dynamic DOM updates to provide accurate currency conversions.</li></ul>                                                                                                                                                                                                 |                     |
| <b>Development of Deepfake Face-Swap Detector</b>   <i>EfficientNet, Frame Difference Module</i>                                                                                                                                                                                                                                                                                                                                                                                    | Apr 2026            |
| <ul style="list-style-type: none"><li>– Built an AI/ML model to detect face-swap deepfake videos using a temporal deep learning approach. Combined EfficientNet-B4, a Frame Difference Module, and a Transformer encoder to identify temporal inconsistencies across video frames.</li></ul>                                                                                                                                                                                        |                     |

## CERTIFICATIONS

- **Web Full Stack Developer Virtual Internship** – AICTE & EduSkills
- **Bootcamp on IoT** – NIELIT Aurangabad (in association with SNIST, Hyderabad)

## CONFERENCES AND WORKSHOPS

|                                                                                                                                                                                                                                                                                       |          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>DevOps and Automation Tools</b>                                                                                                                                                                                                                                                    | Mar 2025 |
| Successfully completed a one-week Student Development Programme at SNIST, Hyderabad. Gained hands-on experience using <b>Selenium</b> with <b>Eclipse IDE</b> to test and validate web applications, improving understanding of automation frameworks and software testing practices. |          |
